AGRO-FORESTRY SOLUTIONS

Savannah Invented the Trailing Sub-soil/Bedding

The Magnum 350 combines the use of an adjustable sub-soil tine and center tillage while bedding. This combination offers breaks down soil compaction in the most difficult clay conditions, and provides the opportunity to replace sub-soiling in certain applications.

The Magnum 350 uses Heavy Duty Magnum Jump Arms, the known standard in relieving plow technology for proven durability. The leading jump arm can be tied into an independent accumulator to assure maximum penetration in the toughest conditions. This ensures 30-40cm of tillage below the original ground surface directly under the planting zone.

The front wheel and lift design offers maximum stability that eliminates turn over potential in rough and sloped sites.

- Produces a 7 ft wide 20" tall well tilled bed
- Inner disks tears through heavy root mat and cultivates to 12 inches deep under planting zone
- A 48" coultter and subsoil tine are available should deeper center soil fracture be desired.
- Unique tillage action keeps debris out of the center of the bed
- Patented High Lift™ Jump Arm system provides 36" of clearance under the disk for years of low maintenance production
- Operates on lower horsepower tractors
- **US Pat. No. 6213220**

SPECIFICATIONS

- Heavy duty Magnum™ hubs and spindles.
- 2.5 gallon accumulator connected to the Stump-Jump™ Hydraulic Relief System
- Width of Cultivation: 7.5 ft.
- Adjustable Sub-soil Tine 40-80cm depth.
- 48" AR400 Coulter Assembly
- Weight: 11,900 lbs.
- Horsepower Requirements:
 - Skidders w/out Sub-soiling: 175 hp
 - Skidders with Sub-soiling: 220 hp
 - Dozers: >190 hp
- Dimensions
 - Width: 9.3 ft
 - Length: 20ft
 - Height : 5.75 ft
 - Weight: 11,900 lbs
- Options
 - 65cm & 1m Packer or Chopper Roller
 - Swept Back, Straight, or Parabolic Ripper
