AGRO-FORESTRY SOLUTIONS

Savannah Global PAT V-Shears are the best blades available in the market and best suited to efficiently shear stumps and move debris to each side of the dozer when required.

The Savannah Model 1070 V-Shears are manufactured to fit Power Angle Tilt Bull Dozer Inner C-Frames.

Typically Stock OEM Hardware is used to attach Savannah Model 1070 V-Shears in the same manner as the original dirt blade.

In the event hardware and C-Frame Specifications cannot be verified, custom mounting hardware that welds to the C-Frame can be fit for installation and easily removed if the Dozer is being used on a rental basis.

Model 1070 V-Shear is with serrated cutting teeth manufactured with Abrasion Resistant steel that have the ability to shear stumps and small standing trees and bushes. The cutting and clearing width of the V-Shear can be custom specified by the customer.

AGRO-FORESTRY SOLUTIONS

FEATURES

- Cutting Blades are spec'd with Hardox 400, standard thickness is $\frac{3}{4}$ ", 1" material is optional.
- Blades are cut with serrated teeth.
- Standard Width of the Blade is 12 inches wider than the outside width of the dozer tracks.
- Models are available for all OEM brands and series PAT configured Dozers.
- Standard, Wide and LGP options available
- Optional Brush Rack for dozer protection available.

Savannah Global designed and commercially offers the only standard PAT Dozer Inside Track Attaching V-Shears. PAT V-Shears are typically designed to just the width of the Dozers track, this minimizes the surface area sheared for proper debris movement prior to plowing. PAT Shears and Dozers are necessary for narrow row planting. Operators verify they offer much better visibility and geometry to make quality shearing operations much easier than a outside mounted shear. A PAT V-Shear allows the optimum performance of lower horsepower dozers.

PAT V-Shears are available for all John Deere, Caterpillar and Komatsu Dozer PAT models.
