Model 1710

Trailing Stump Puller

3-8" Diameter Stumps

Savannah[®]

AGRO-FORESTRY SOLUTIONS

Savannah® Model 1710 Trailing Stump Puller revolutionizes stump removal of small plantation planted trees such as Christmas Trees, Vineyards and other species with stumps up to 8” in diameter.

The Model 1710 Stump Puller is designed to pull stumps in the 3-8” diameter range in varying soil conditions. The action of the Model 1710 lifts and pulls the stump with Lifting Wheels that extract the stump so a Savannah Model 1200 Series Rotary Rake can roll and tumble every stump over the face of pinwheels, so soil is released from the stump roots and piled into windrows that are free of soil and burn or in-field grind optimally.

The Model 1710 is a patented design that uses (2) 1.75m 5.8ft. Lifting Wheels mounted at an optimum geometry to grab and lift the stump and main root structure high enough to release from the soil for efficient raking.

The Model 1710 Stump Puller optimum pulling speed is 4 mph which pulls at a rate of 3-4 acres per hour based on 10ft. row spacing.

The Model 1710 Stump Puller weighs 13,000 lbs.

Recommended Horsepower Requirements:

>100 hp Bull Dozers

>150 hp 4WD Tractors

Patented: US10,349,586
